

Bee Pol

Description:

Bee Pol is a pollen substitute supplying proteins, sugars, minerals, and B-complex vitamins to bees. Use **Bee Pol** to build colonies in late winter or early spring, to prepare for pollinating, and to maintain/increase brood production prior to and after honey flow. **Bee Pol** may be fed in a dry form or made into a paste.

Analysis:

	Typical Value
Crude Protein, %	32.0
Sucrose, %	33.0
Moisture, %	5.0

Features:

- An “All Natural” Pollen Substitute
- Contains 32% protein and 33% sucrose and all the essential amino acids and B-vitamins
- Increases brood rearing, allowing stronger splits from established colonies
- Improves over-wintering and condition of bees, enhancing bee survivability
- Promotes higher populations of young, well-fed bees, resulting in fewer colony losses
- Increases potential for honey production from packaged bees, nucleus colonies, and established colonies
- Can be fed in wet or dry form
- Research proven
