

Candy Oats

Description:

Candy Oats is a unique complex of highly digestible sugars and cooked cereals. Both the sugar and oat components have been shown to improve palatability of pig nursery feeds. The cooked cereals and sugars provide highly digestible carbohydrates and thus a readily available source of energy to the young pig. Typical inclusion levels range between 5-10% in pig starter feeds to increase feed intake and enhance performance of weaned pigs.

Analysis:

	Typical Value
Crude Protein, %	2.5
Ash, %	3.0
Total Sugar, %	60.0

Features:

- Manufactured from high quality specialty food products
- Consistent nutrients profile
- Natural fruit flavors and aroma improve palatability of pig feeds
- Highly digestible energy sources to young pigs
- Enhances pelleting properties of pig starter feeds
