

# RumenBiotic

## Description:

**RumenBiotic** is a unique complex of simple sugars, dairy components, oligosaccharides, yeast, and fermentation products that provides a rapidly fermentable energy source and growth factors for rumen microbes. The end result of improved feed intake, enhanced forage digestion, and increased protein utilization is a stimulation in milk production for dairy cattle or increased weight gain in beef cattle. RumenBiotic is recommended at a rate of 454 grams/head/day for dairy and beef cattle.

## Analysis:

	Typical Value
Crude Protein, %	11.5
Sugar, %	57.5
NFE (NFC), %	79.9
NE <sub>L</sub> , Mcal/kg	1.94

## Features:

- Rapidly fermentable sugars and starch to support VFA production
- Yeast and fermentation products to enhance microbial activity
- Pleasant, sweet taste to encourage DMI
- Greater milk production
- Available in bags, totes and bulk
