

Solu-E

Description:

Solu-E is an excellent source of highly digestible sugars, oligosaccharides, and fat. The primary oligosaccharide fraction of Solu-E is glucose polymers from corn syrup solids, which are highly digestible in young animals. The protein component is milk origin casein. The palatability, digestibility and high energy content of Solu-E make it an ideal ingredient for calf milk replacers. The recommended inclusion rate ranges from 5% to 10% in calf milk replacers.

Analysis:

	Typical Value
Crude Protein, %	4.5
Crude Fat, %	28.0
Total Sugar and Oligosaccharides, %	55.0

Features:

- Highly digestible carbohydrate fraction
- High quality source of stabilized vegetable fat
- Milk origin protein (caseinates)
- Water soluble
- Highly palatable, mildly sweet, milky flavor
- Free-flowing, white powder
- Economical replacement for fat and a portion of lactose
- Available in multiple sizes including bags, totes and bulk
