

PF-34

Description:

PF-34 is an excellent source of highly digestible proteins, fat, and water soluble sugars for calf milk replacers. The protein component in PF-34 comes from soy protein isolate and milk casein. The fat contains medium chain fatty acids that are important for newborn calf performance and health. PF-34 is an easy-to-use pound-for-pound replacement for a portion of WPC-34 or Non-Fat Dried Milk, while giving credit for the higher energy content of PF-34. The recommended inclusion rate ranges from 5% to 15% in calf milk replacers.

Analysis:

	Typical Value
Crude Protein, %	34.0
Crude Fat, %	18.0
Total Sugar and Oligosaccharides, %	34.5

Features:

- Well-balanced essential amino acid profile with excellent digestibility
- Low anti-nutritional factors
- High quality source of stabilized vegetable fat
- Highly digestible carbohydrate fraction made up of glucose polymers
- Water soluble
- Highly palatable, mildly sweet, milky flavor
- Free-flowing, white powder
- Economical replacement for WPC-34 & NFDM
- Available in multiple sizes including bags, totes and bulk
