

SP-75

Description:

SP-75 is a unique blend containing high quality protein and lactose. The protein component in SP-75 comes from soy protein isolate, which yields a well-balanced essential amino acid profile with excellent digestibility. In addition, the lactose fraction is a desired energy source for young animals. The rich nutrient content of SP-75 and high solubility make it an ideal ingredient in milk replacer and liquid diets for young calves. SP-75 is recommended at an inclusion rate of 5-15%.

Analysis:

	Typical Value
Lactose, %	7.5
Crude Protein, %	75.0
Crude Fat, %	1.5
Ash, %	4.5

Features:

- Consistent, high-quality protein and sugar content
- Dried fresh to ensure no deterioration of nutrients
- Nice, flowing powder
- Available in multiple sizes including bags, totes, and bulk
- Economical and ideal protein and sugar ingredient for calf milk replacer and liquid applications
